

DEVELOPMENT

Abacus and Vedic Mathematics

Abacus and Vedic Mathematics classes, which began two years ago (2022–23) as optional programmes for interested students, have now been successfully implemented across the whole school. These programmes have greatly benefited the students by improving their mental calculation skills, concentration, and confidence in solving mathematical problems. Students are progressing remarkably well, showing improved speed, accuracy, and analytical thinking in their studies. The positive response from students and parents has encouraged the school to continue strengthening these programmes.

This year, students also benefited from Cube Learning exercises, which sharpened their logical thinking, problem-solving abilities, and mental agility. Along with this, Calligraphy sessions were conducted to enhance students' handwriting skills, patience, creativity, and artistic expression. These activities have helped students develop both intellectual and aesthetic skills.

Robotics Education:

Keeping in mind the importance of technology in modern education, we have also initiated Robotics Classes in the school. Through these sessions, students are introduced to basic concepts of robotics, coding, and innovative thinking. These classes will be fully implemented in the coming days, preparing our students to face future technological advancements with confidence and curiosity.
