

DIGITAL GROWTH, ACADEMIC EXCELLENCE AND INFRASTRUCTURE DEVELOPMENT

Focused Learning Environment

A seminar on “How to Focus on Studies” was conducted by Fr. G. Showri reddy to help students develop better concentration, self-discipline, and effective study habits. The session provided practical techniques on time management, goal setting, avoiding distractions, and maintaining a balanced routine. Students actively participated and gained valuable insights on how consistent effort and proper planning can lead to academic success.

Smart Classroom Enhancement

In keeping with our commitment to digital advancement, all classrooms were upgraded with Smart Boards to create a more engaging and technology-driven learning environment. Modern educational platforms such as Tata Class Edge, Teachmint, Class Saathi for higher classes and MI Kids were integrated into the teaching process, especially for the lower classes. These tools

have enriched classroom instruction through interactive content, digital assessments, real-time feedback, and activity-based learning.

Teachers received comprehensive training to effectively utilize these digital resources, ensuring a smooth transition to smart learning methods. This initiative has significantly enhanced student engagement, improved conceptual understanding, and fostered a more innovative and interactive classroom experience.

Through these advancements, the institution continues to strengthen its vision of blending technology with quality education to prepare students for the challenges of the modern world.
